
TST-GEO

Anti-Geosmog and Anti-Electrosmog Device

Based on a unique Hungarian scientific discovery

Natural energy against harmful radiation

TST-GEO

The TST-GEO device can be used against all forms of geopathic zones or radiation zones of the Earth, as well as against most harmful effects caused by the sources of electrosmog which create geopathic zones.

There are few known ways to eliminate the adverse health effects of Earth's geopathic radiation. The main means would be the mental strength of a specialist - but now TST-GEO offers a new, equally effective solution.

If you suffer from the effects of geopathic terrestrial radiation, simply place the TST-GEO under your bed to sleep much better. It will also help you prevent illnesses arising from Hartmann's crosses or other forms of geopathic radiation. In addition, the TST-GEO can almost completely neutralize the effects of electrosmog (cell phones, relay antennas, wifi).

Your body can accept electromagnetic radiation as long as it is linked to information appropriate for your body. The TST-GEO makes this connection between electrosmog and information, thus allowing the body to escape harmful effects.

Other devices on the market simply attempt to attenuate or eliminate the high frequencies of electrosmog to limit damage to the body, but this is not enough.

To use your TST-GEO:

- Place the device on the floor or a flat surface (under the bed, in the office, etc.).
- The device operates within a radius of approximately 30m² indoors, and 100m² outdoors.
- The TST-GEO consumes so little current that it remains permanently on. Battery life is at least one year. See below for instructions on how to change the battery.

An all-purpose format

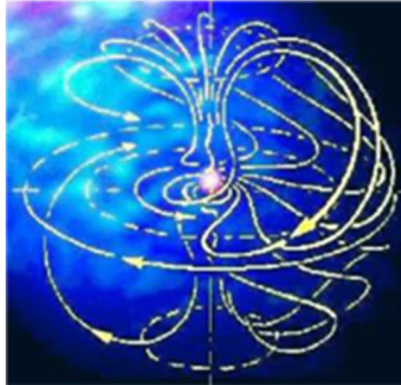

The mini format of the TST GEO is designed to easily allow you to use it on the go, in hotels, trains, planes, in the office, etc. It can be carried on your person, in your pocket or in a handbag.

Technical details

The TST GEO uses a CR 2032 type battery. The device never turns off. When the light goes out or after a year of use, the battery should be changed. We noticed a decrease in effectiveness after about 12 months without changing the battery.

How does it work ?

The TST-GEO has a newly invented resonator, which operates in a special tetra-polar electrical system. This connects the untuned resonances under the bed or under the desk, which are harmful to health, with the great cosmic unity, and the tuning is done by the Cosmos itself. Among all the devices in the world used against Earth radiation, only TST-GEO works on the basis of this effective principle.

The geo-biological resonances of the Earth are the harmonizing and nourishing source of terrestrial life. When this resonance formula is distorted, it becomes harmful to health. The TST-GEO allows geo-biological resonances to be retuned within a radius of 3 to 5 meters from the device, restoring their beneficial and nourishing effect. This is how not only the problems caused by harmful radiation from the Earth can be eliminated, but at the same time the organism can regain its proper cosmic connection.

TST-GEO technology

The TST-GEO transforms ordinary electromagnetism into a higher form of electromagnetism, or torsion fields, which binds our organisms to the Earth and from which they derive their life force. We are all creatures of the Earth and, as such, we depend on the energy of the Earth in all its forms, whether it comes from the Earth itself, from the atmosphere, from various combinations of elements that surround us or from even the rotation of the Earth.

Take for example Schumann waves, which are the electromagnetic resonance of the Earth. When the first astronauts left Earth's natural environment, they suffered serious damage to their health, even during a relatively short time in space. It was later discovered that for most of these astronauts, the cause of their health problems was simply the absence of Schumann waves. As a result, every spacecraft today incorporates structures that artificially replace these waves, so that the body does not suffer from a geospheric deficit.

Much research has been carried out on torsion fields, notably by Russian scientist Dr Kozyrev. Along with other leading scientists such as Einstein and Eli Cartan in the 1930s, he demonstrated that torsion waves emanate from all matter and that all atoms are in fact generators of torsion waves.

The spiral electromagnetic phi waves of implosion physics discovered by Daniel Winter, rotating in opposite directions and spiraling toward the nucleus of the atom, cancel out the components of the electromagnetic waves, resulting in a torsion wave. Some scientists believe that torsion waves are the missing

link in the search for Einstein's unification theory. It seems that electromagnetism, gravity and torsion waves all belong to the same family. They are all part of the resonance of the ether.

The most surprising fact that might indicate that the unification theory is not so distant anymore is that Kozyrev discovered that human thoughts and feelings also generate torsion waves. He measured torsion waves as a direct result of sudden changes in an emotional state. Indeed, he showed that consciousness is linked to the resonance of the ether.

The TST-GEO is based on the discovery that the vast majority of geospheric effects are rooted in an original four-pole electromagnetic system, recreated by the makers of the TST-GEO, Torsion Semiconductor Technic. These effects are just as important for healthy biological life as Schumann waves are for astronauts.

The TST-GEO's four-pole electromagnetic generator emits torsion waves to recreate and rebalance the electromagnetic environment, restoring an ideal geospheric environment in which life processes can evolve at their optimal level. Simply put, it takes all the electrosmog or geopathy and makes it acceptable to our body, so that our health is not compromised. Indeed, by restoring the natural environment of the geosphere, our health can be stronger, our body systems can be more efficient and healing is accelerated.

Interestingly, torsion fields are actually generated by the body itself during a number of physiological processes throughout the day. This higher form of electromagnetism is essential for chemical transformations in mitochondria, synapses, protein synthesis,

digestion, etc. As we age, our bodies' connection to our natural geospheric environment is distorted and weakened. TST technology helps our body systems return to their **original** order, allowing the body to evolve to the highest level of efficiency possible in its current condition.

Just as astronauts do not eject contaminated water into space, but purify and reuse it in a natural cycle, **the** TST-GEO helps us correct distorted electromagnetism and restore its original, natural and beneficial properties, essential to life.

What are torsion fields?

According to A. Akimov, there are at least three types of these fields: the E, S and G fields. The letters E, S and G indicate an electric, rotational (spinning), or gravitational field. The torsion field and its emanations are subtle energy fields. They are separate and distinct from classic electric, magnetic, and gravity fields. Generators of these conventional fields can be protected against electromagnetic fields, but a torsion field always passes through such protection.

Torsion fields can be created, detected, switched on or off (e.g. for communication purposes), and are a distinct type of energy field not previously understood in classical physics. Emanations from torsion fields can travel at speeds at least 109 times the speed of light. Torsion fields can interact with laser beams (change frequency), can affect biological processes, are produced by melting or solidifying certain materials, affect quartz crystals and certain electronic components, can modify certain beverages in beneficial ways, and can influence gravity.

1. The maximum speed of torsion waves is estimated to be as much as 109 times the speed of light.
2. Torsion fields can propagate through space without being limited by the light spectrum. This means that they can move into the future as well as into the past.
3. Torsion fields transmit information without transmitting energy.
4. Torsion fields are not constrained by the principle of superposition.

According to Akimov, torsion fields, combined with classic electric, magnetic, and gravitational fields, should provide the basis for a unified field theory that would expand the domain of science to include the effects of consciousness. The concept of divination, for example, thus finds a scientific explanation.

If Akimov's claim proves viable, science will have the opportunity to expand its scope more quickly toward the psyche, which could represent a decades-long adventure of scientific discovery. An important fact deserves to be underlined: in the context of the interaction of electric and torsion fields, it is demonstrated that when electromagnetic or electrostatic fields exist in a given space, there always also exist torsion fields in this same space. There are no electromagnetic or electrostatic fields without a complement of torsion.

The TST-GEO is effective against:

Earth radiation lines

- Hartmann lines
- Curry lines
- St Georges Lines
- Ley lines, etc.

Non-periodic zones

- Water veins
- Telluric radiation
- Cave radiation
- High voltage power lines
- Speed cameras
- Microwave appliances
- Antennas & WIFI
- Industrial transformers

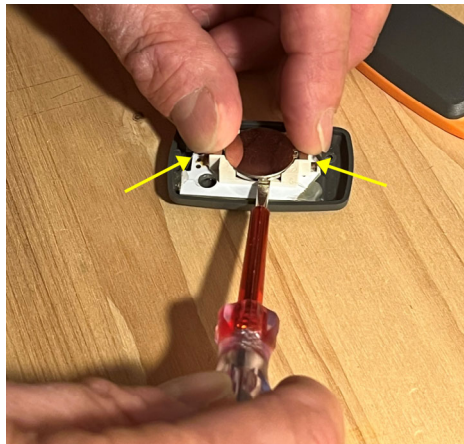

Changing the battery

To change the battery, simply unscrew the back and separate the two sides of the case, by sliding your fingernail behind the silicon centerpiece.

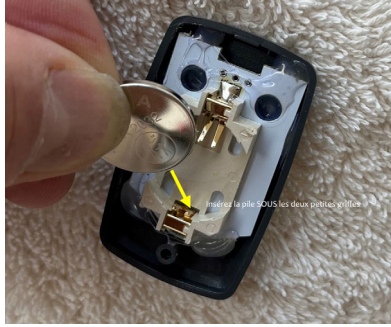

Very important

When removing the old battery, BE CAREFUL not to break the soldered connections on either side of the battery holder. Place two fingers on either side of the battery holder to hold it firmly in place while you carefully pry out the battery with a small screwdriver.

Insert the battery as shown in the image below, make sure that the two small contacts are on over the battery (see arrows below) and the two large contacts are under the battery.

**Innovative solutions
for your health and well-being**
